

WEDGE CLAMPS – THE ULTIMATE FASTENER

1. HOW DO YOU HANG AND FASTEN YOUR GUARDS - NUTS & BOLTS?
2. DO YOU HAVE GUARDS MISSING BECAUSE SOMEBODY DIDN'T PUT THEM BACK ON?
3. DO YOU WANT TO REDUCE YOUR DOWNTIME AND MAINTENANCE COSTS?
4. HAVE YOU EVER LOST OR MISPLACED YOUR GUARD MOUNTING HARDWARE?

If you answered “yes” to any of the above you need to know there is a better way

1 Wedge clamp fully open

2 Wedge clamp partially closed

3 Wedge clamp fully closed complete with cable tie

4 REASONS WHY WEDGE CLAMPS ARE BETTER

1. QUICK AND EASY GUARD REMOVAL AND INSTALLATION

- › Easily remove or reinstall a guard in 15 seconds or less
- › No strain or struggle, simply cut the tie wrap, disengage the clamp and remove the guard

2. ONE PERSON, ONE HAND OPERATION

- › Wedge clamps are easily opened and closed with one hand, allowing your other hand to be free to stabilize the guard
- › No needs to reach in behind the guard to locate a nut or bolt

3. ONLY ONE TOOL REQUIRED

- › Keep your heavy tool box in the shop. The only tool you will need using wedge clamps is a pair of side cutters

4. NO LOOSE PARTS TO GO MISSING

- › Dropping a nut when you are 100 ft in the air can be a real pain. No bolts or nuts = no missing parts
- › Missing hardware leads to missing guards or guards not secured properly
- › Wedge clamps simply pivot open and pivot close with no loose parts to go missing
